

Stapylton Hyperscale Data Centre Campus Project Cerebrum AU Initial Capital Raise

Executive Summary

Fortis Fundamenta Pty Ltd, in partnership with Load Link Australia Pty Ltd, is developing a world-class Hyperscale Data Centre Campus at 50 Johnstone Road, Stapylton, Queensland.

This project will be a sovereign-scale digital infrastructure asset, anchoring Australia's role in the AI, quantum computing, and data economy.

The Stapylton Hyperscale Campus will deliver:

500 MW of compute capacity across ~100,000 m² of data halls.

33 MW of on-site solar energy dedicated to cooling (net-zero cooling loop).

Closed-loop river water heat exchange system using the Albert River, providing sustainable, non-consumptive thermal management.

Estimated completion value: A\$8.4 billion.

We are raising \$5 million to complete the Ministerial Infrastructure Designation (MID) approvals phase, a pathway already receiving encouraging early support from the Queensland Government as State-significant infrastructure.

Project Overview

Location: 50 Johnstone Road, Stapylton QLD

Site area: ~380,000 m² (single freehold parcel).

Frontage: 420 metres of Albert River – ideal for water-based cooling.

Site Ownership – Kosseris Group

Electrical proximity: Existing high-voltage feeder infrastructure and easements on site, providing direct interface with existing electrical grid.

Transport & infrastructure: Central to the Brisbane–Gold Coast–Logan growth corridor, with nearby access to the M1 Motorway and the new Coomera Connector.

Solar potential: 150,000 m² rooftop and ground-mounted array space, offsetting operational load.

This site uniquely supports grid-scale data infrastructure, renewable energy integration, and sustainable cooling design, making it one of the most strategic hyperscale parcels in Australia.

The Vision

A sovereign, sustainable, and scalable Hyperscale Data Centre Campus that positions Queensland as Australia's third hyperscale hub, after Sydney and Melbourne.

500 MW of compute capacity designed for AI and quantum workloads.

Net-zero cooling through closed-loop heat exchange via the Albert River, powered by dedicated solar.

Sovereign AI infrastructure, supporting defence, finance, research, and enterprise.

Future-proofed for next-generation technologies (graphene and photonic processors).

This project directly supports the State's Digital and Quantum Future and enhances national security and redundancy by diversifying data infrastructure away from the NSW/VIC concentration.

Economic & Strategic Impact

Construction employment: ~3,500 jobs over multi-year delivery.

Ongoing operations: ~4,500 skilled roles in IT, R&D, and maintenance.

Catalyst for R&D: Cooling, energy systems, AI/ML acceleration, cyber, and chip design.

Spillover effects: Drives SME growth, AI startups, university partnerships, and workforce training pathways.

Why Australia — and Why Now

Global AI and hyperscale expansion are accelerating:

Global DC CapEx: US\$400B (2024) → US\$500B+ (2025).

AWS A\$20B investment (2025–2029)

Opportunity: Position Queensland as the third national hub, delivering sovereign capability and latency advantages to 3.8M+ SEQ residents.

With OpenAI, Microsoft, AWS, and NVIDIA racing to deploy 10+ GW of AI compute capacity globally, Queensland must act now to capture its share of this wave.

Planning & Approvals Pathway Ministerial Infrastructure Designation (MID)

Approving body: Queensland Minister for State Development.

Assessment: Coordinated strategic evaluation focusing on State significance.

Advantages:

- No third-party appeals.
- Streamlined multi-agency coordination.
- Recognition as critical infrastructure.
- Facilitates federal co-funding and strategic investment.

Status:

- Initial meetings held with Queensland State Government.
- In-principle support acknowledged to proceed under the MID process.
- Environmental and design consultants (Greenbox Architecture, Ratio Consultants) and others are already engaged.

Use of Funds — \$5 Million Capital Raise

The initial capital raise will fund all approvals, technical design, and due diligence required to reach MID approval and construction readiness within 12 – 24 months.

Exit & Investor Return Pathways

Early-stage investors gain access to a strategic pre-development equity position in an \$8.4 billion asset before hyperscale operator onboarding.

Potential exit or conversion pathways include:

- Land equity sale / JV with an international hyperscaler (AWS, Microsoft, Meta, OpenAI).
- Government or institutional co-investment following MID approval.
- Roll-up equity into the development SPV at valuation uplift upon approval milestone.

Indicative Program

- Capital Raise Completion (Q4 2025): Secure \$5M - approvals funding.
- Operator Engagement (Q4 2025): Commence JV negotiations with hyperscale tenants.
- MID Lodgement (Q1 2026): Finalise technical and planning documentation.
- State Designation (Q3 2026): Attain Ministerial approval for MID.

With government support and investor capital, we can deliver Australia's most advanced hyperscale data infrastructure, powering Australia's AI, digital and quantum future.

If you have any further enquiries please contact me at your earliest convenience.
